### Growth Characteristics of *Ephelota gigantea*: a Pest to Seaweed Culture along the Northeastern Coast of Japan

Toshimasa KOBAYASHI, Nobuyuki NAKANO, Takaaki MUTO, and Yoshinari ENDO

Regression equations in Figs. 2 and 3 were incorrect. The correct equations are  $BL = 65.91 + 19.03 d$  and  $BW = 299.98 + 29.73 d$  in Fig. 2 and  $BW = 191.48 + 1.22 BL$  in Fig. 3.  $r$  and  $p$  values were correct. Accordingly, the following corrections in the text are necessary.

Page 342, left column, 9th line from the bottom

“ $BL = 19.03 + 65.91 d$ ” to be read as “ $BL = 65.91 + 19.03 d$ ”

Page 342, left column, 8th line from the bottom

“with a growth rate of  $66 \mu\text{m d}^{-1}$ ” to be read as “with a growth rate of  $19 \mu\text{m d}^{-1}$ ”

Page 342, left column, 6th line from the bottom

“ $BW = 29.73 + 299.98 d$ ” to be read as “ $BW = 299.98 + 29.73 d$ ”

Page 342, left column, 5th line from the bottom

“with a growth rate of  $300 \mu\text{m d}^{-1}$ ” to be read as “with a growth rate of  $30 \mu\text{m d}^{-1}$ ”

Page 342, right column, 15th line from the bottom

“ $BW = 1.22 + 191.48 BL$ ” to be read as “ $BW = 191.48 + 1.22 BL$ ”
